CLAYTON ROSENTHAL

hire@clayrosenthal.me • linkedin.com/in/clay-rosenthal • San Francisco, CA

EXPERIENCE

Amazon: Member of Technical Staff, Sep 2024 -

- Managed thousands of GPUs across multiple data centers for large-scale VLM training
- Introduced job management and queueing with SkyPilot to improve GPU utilization and reduce researcher wait times
- Facilitated secure deployment of dozens of internal applications using AWS CDK and Kubernetes
- Built internal tooling that accelerated 100+ engineers and researchers with improved cluster access, data sharing, and observability
- Oversaw open source release of Holosoma, which surpassed 1,000 GitHub stars
- Worked across the PyTorch, CUDA, and vLLM ecosystems to improve training infrastructure
- Accelerated policy evaluations with custom tooling to launch dozens of parallel sim environments

Covariant: Production Engineer, Sep 2022 - Sep 2024

- Enhanced connectivity between on-prem servers, developers, and customers
- Created tools to help developers and customers discover and remediate issues
- Migrated the configuration management stack to Puppet and Terraform
- Expanded our compute capacity in varied cloud environments to maximize GPU availability
- Orchestrated Kubernetes clusters across various cloud providers for AI training
- Brought security into developer workflows, adopting better practices and tools

Palo Alto Networks: DevOps Site Reliability Engineer, Jun 2020 - Sep 2022

- Built containerized CI/CD pipeline to deploy and maintain Cloud NGFW for AWS
- Designed and created a website to ensure fast stable connections to internal VPN
- Integrated monitoring software with processes to keep our service running smoothly
- Collaborated across the team to achieve SOC II compliance and audit

Palo Alto Networks: Quality Assurance Automation Engineering Intern, Jun - Sep 2019

- Expedited Python scripts execution to be 167% faster, allowing customers to be protected as soon as possible.
- Re-architected process to enable simultaneous configurations as opposed to previous sequential approach.
- Expanded SQL database to allow threats to be organized by severity.
- Simplified prioritization to accelerate developer’s ability to address test failures.

Plex: Quality Assurance Engineering Intern, May 2017 - Jun 2019

- Communicated with developers to determine software needs and executed assigned tasks.
- Scripted automation of testing for areas of mobile applications and website functions.
- Expanded testing to app functionality not previously automated. Manually tested specific areas in order to automate further.

EDUCATION

California Polytechnic State University, San Luis Obispo

- BS in Computer Engineering - Class of 2021
- Awards: Summa Cum Laude, GPA: 3.78
- Relevant coursework: Knowledge Discovery from Data, Data Structures, Discrete Structures, Computer Networks, Object Oriented Design

COMPETENCIES

Technical

- Fluent in Python, Terraform/OpenTofu, Puppet, Docker, Kubernetes, AWS CDK
- Proficient with TypeScript and React, including internal tooling apps and CDK infrastructure
- Experienced with AWS, GCP, and neo-cloud GPU providers; ML infra including PyTorch, CUDA, vLLM, and SkyPilot
- Comfortable with Linux on servers and the desktop
- Practiced with Github Actions, Jenkins, and Argo CI/CD
